WORKFLOW

- The website starts from the starting point first. From here, he can proceed by choosing one of the consumer or producer sections.
- When the consumer makes a choice, the consumer home page appears.
 - This homepage is for a user preview.
 - If the consumer reaches the login section and enters the data that matches with the database, they will have successfully logged in.
 - If they click on the sign up option, they can successfully create an account in the system.
 - After logging in, the user can see the device and its data, graphics.
 - The graph data is constructed based on real-time data. It considers the user's consumption at specific time intervals and reflects it on the graph accurately.

- You can get information about the site from the Features, About, FAQs section.
 - When you're done, you can log out with the log out button.
- When the producer makes a choice, the producer page appears.
 - We have one producer.
 - After logging in, the page comes which shows
 - Toggle Buttons
 - Change Temperature
 - Change Weather Forecast parts.
 - And you can change or see data about devices.
 - When you're done, you can log out with the log out button.

About Project

In our project, we utilized a MySQL database. We stored user information in the database and also kept track of our sensors and their values. As needed, we retrieved data from the database and used it accordingly.

- While developing our project, we wrote some code to creation data for the sensor.

```

public class data_creator {
    public static void main(String[] args) {
        createInsertionsForWeather("INSERT INTO `chart_weather` VALUES (9, \"alperkaya\", \"2023-06-02\",
11);");
    }
    public static void createInsertionsForTemperature(String s) {
        String[] arr = s.split("9|2023-06-02|11|alperkaya");
        String[] _arr = new String[]{"110", "meryemAhiskali", "2023-06-02", "11"};

        for (int j = 0; j < 1000; ++j) {
            _arr[0] = (Integer.parseInt(_arr[0]) + 1) + " ";
            _arr[2] = _arr[2].substring(0, _arr[2].length()-1) + (int)(Math.random()*9 + 1);
            _arr[3] = Integer.toString((int)(Math.random()*100));

            int k = 0;
            for (int i = 0; i < arr.length; ++i) {
                System.out.print(arr[i] + (k < _arr.length ? _arr[k++] : " "));
            }
            System.out.println();
        }
    }

    public static void createInsertionsForLightUsage(String s) {
        String[] arr = s.split("9|2023-06-02|11|alperkaya");
        String[] _arr = new String[]{"210", "alperkaya", "2023-06-02", "11"};

        for (int j = 0; j < 1000; ++j) {
            _arr[0] = (Integer.parseInt(_arr[0]) + 1) + " ";
            String randomYear = "2022";
            randomYear += (int)(Math.random()*4)+" ";
            String randomMonth = (int)(Math.random()*12 + 1)+" ";
            String randomDay = (int)(Math.random()*27 + 1)+" ";
            if (randomDay.length() < 2) randomDay = "0" + randomDay;
            if (randomMonth.length() < 2) randomMonth = "0" + randomMonth;
            _arr[2] = randomYear+"-"+randomMonth+"-"+randomDay;
            _arr[3] = Double.toString(Math.random()*1000);

            int k = 0;
            for (int i = 0; i < arr.length; ++i) {
                System.out.print(arr[i] + (k < _arr.length ? _arr[k++] : " "));
            }
            System.out.println();
        }
    }

    public static void createInsertionsForEnergyConsumption(String s) {
        String[] arr = s.split("9|2023-06-02|11|alperkaya");
        String[] _arr = new String[]{"1000", "alperkaya", "2023-06-02", "11"};

        for (int j = 0; j < 1000; ++j) {
            _arr[0] = (Integer.parseInt(_arr[0]) + 1) + " ";
            String randomYear = "2022";
            randomYear += (int)(Math.random()*4)+" ";
            String randomMonth = (int)(Math.random()*12 + 1)+" ";
            String randomDay = (int)(Math.random()*27 + 1)+" ";
            if (randomDay.length() < 2) randomDay = "0" + randomDay;
            if (randomMonth.length() < 2) randomMonth = "0" + randomMonth;
            _arr[2] = randomYear+"-"+randomMonth+"-"+randomDay;
            _arr[3] = Double.toString(Math.random()*1000);

            int k = 0;
            for (int i = 0; i < arr.length; ++i) {
                System.out.print(arr[i] + (k < _arr.length ? _arr[k++] : " "));
            }
            System.out.println();
        }
    }

    public static void createInsertionsForWeather(String s) {
        String[] arr = s.split("9|2023-06-02|11|alperkaya");
        String[] _arr = new String[]{"1000", "meryemAhiskali", "2023-06-02", "11"};
        String[] weathers = new String[]{"sunny", "rainy", "cloudy", "stormy", "windy"};

        for (int j = 0; j < 1000; ++j) {
            _arr[0] = (Integer.parseInt(_arr[0]) + 1) + " ";
            String randomYear = "2022";
            randomYear += (int)(Math.random()*4)+" ";
            String randomMonth = (int)(Math.random()*12 + 1)+" ";
            String randomDay = (int)(Math.random()*27 + 1)+" ";

USAGE

After you copied the files to your htdocs, which you can find at /opt/lampp/htdocs in Linux or C:/xampp/htdocs in Windows, you can access the webpage at localhost/[YOUR_FOLDER_NAME].

Login Credentials

Consumers:

The consumers already present in the system.

username - password:	meryemAhiskali	1234
	alperkaya	5678

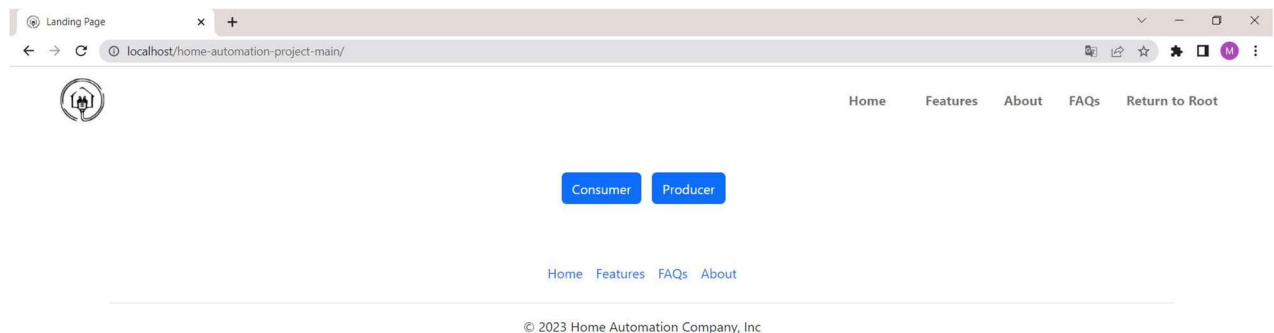

If you want to add a new user. You should pay attention to these:

- Username must be letters and spaces only.
- Password must be only numbers.

Details

Pages like Features, About, FAQs are consumer targeted pages. Return to Root, Return to Producer, Return to Consumer buttons are made specifically for our teacher to navigate easier between consumer and producer. We designed the charts and tables based on daily life data and stored this information in a database. Then, we generated charts and tables by running various queries.

Login Information for Producer:

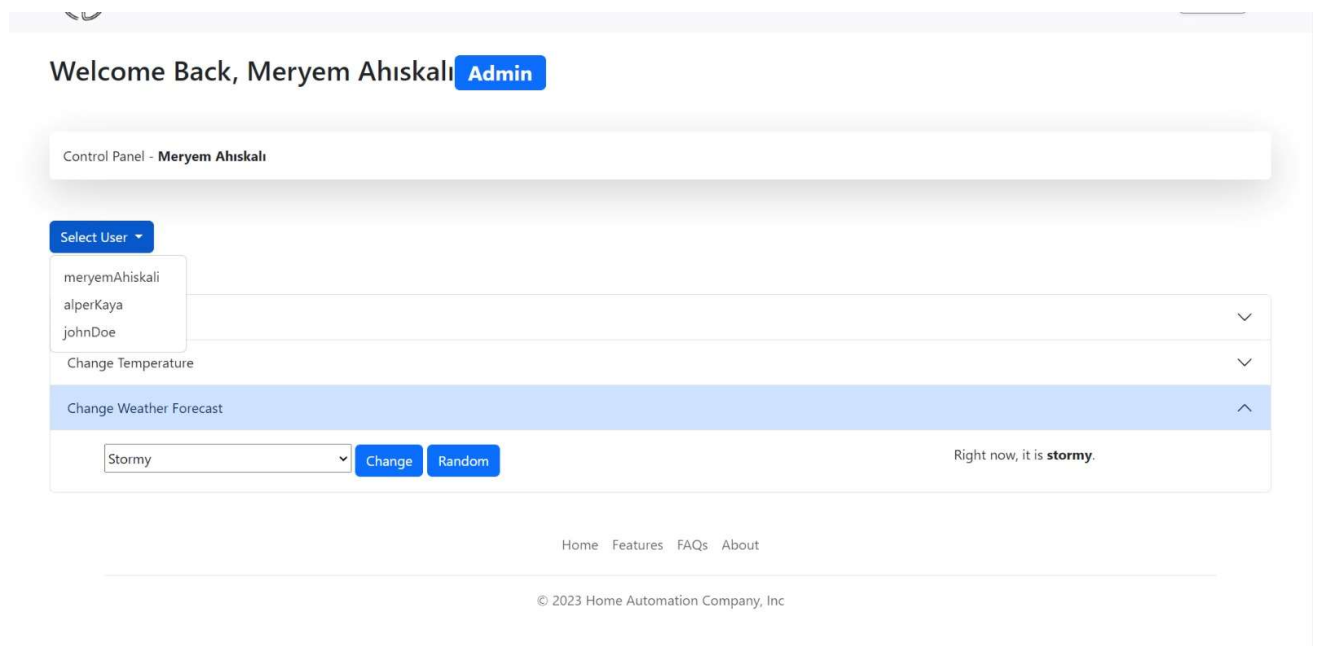

Username : “meryem”

Password : “1928”

- **After Logged In**

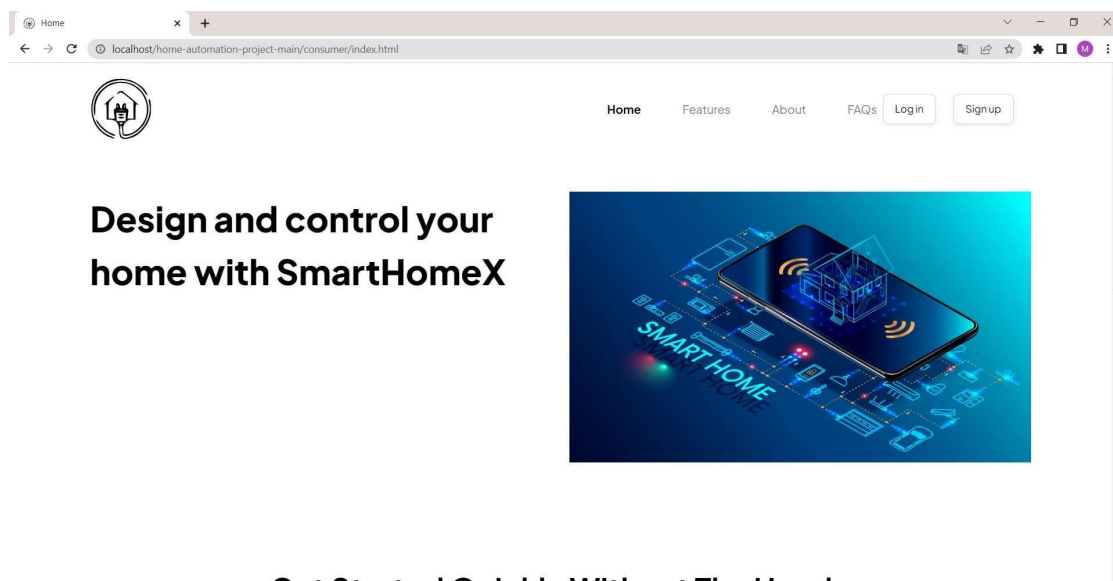

The producer can select the consumer information that the system possesses from here. The settings of the selected consumer are displayed.

- **Log out**

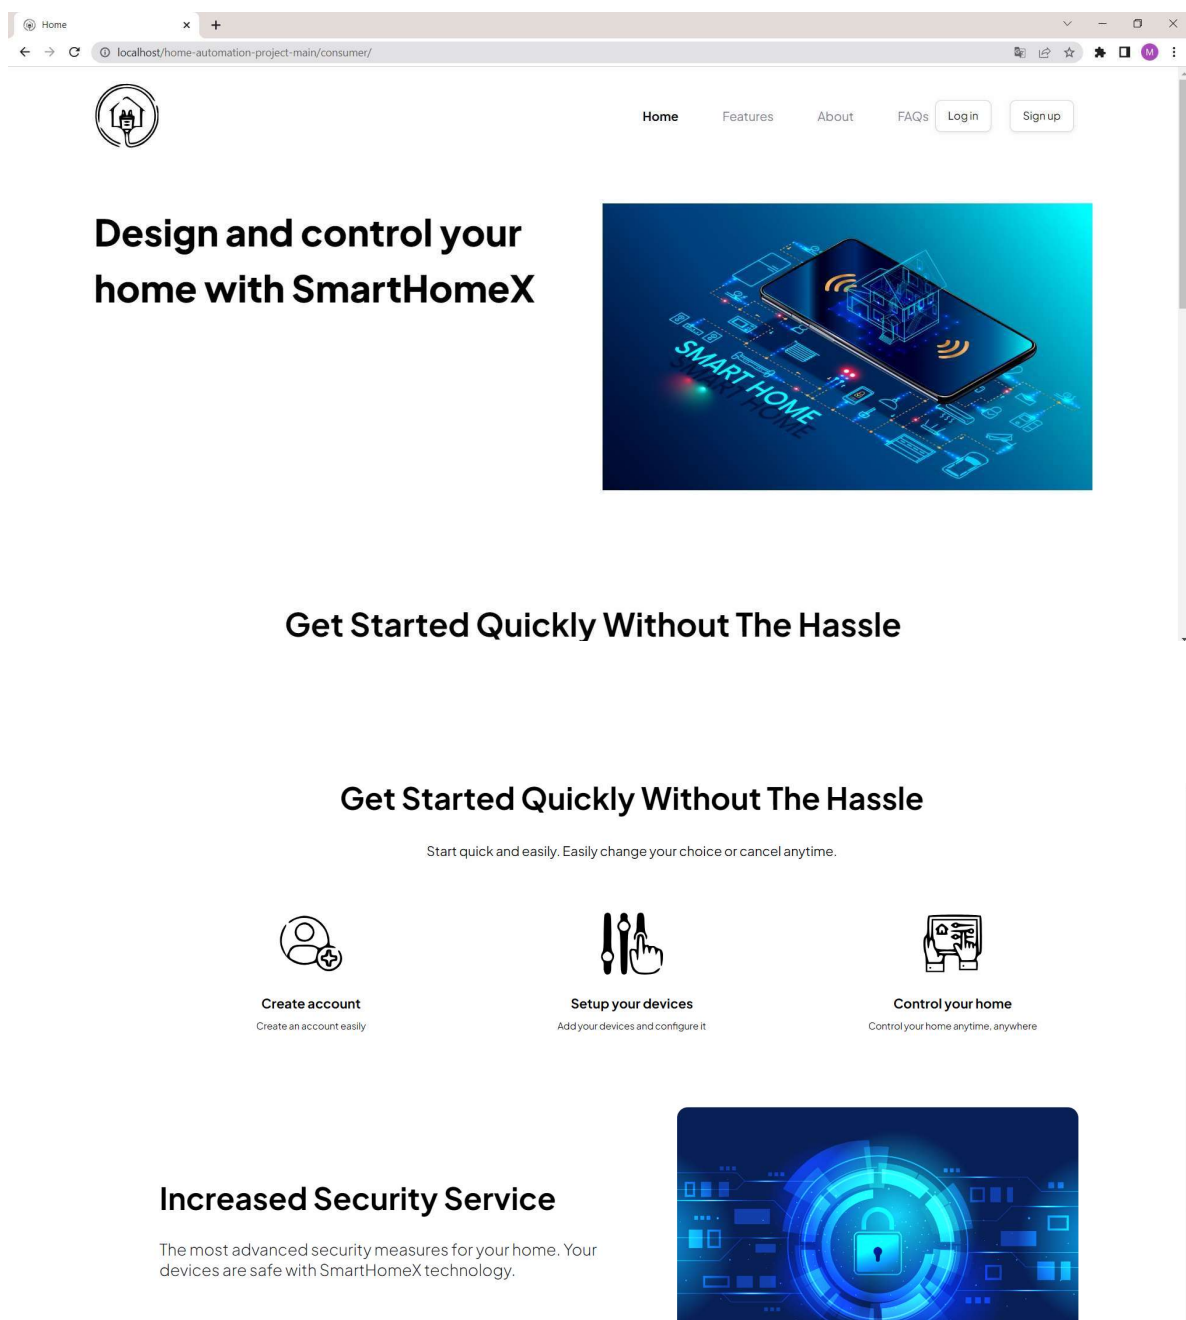

When the producer clicks the “Log out” button, it is directed to the Consumer Home Page. (This page for consumer to first look of the page.)

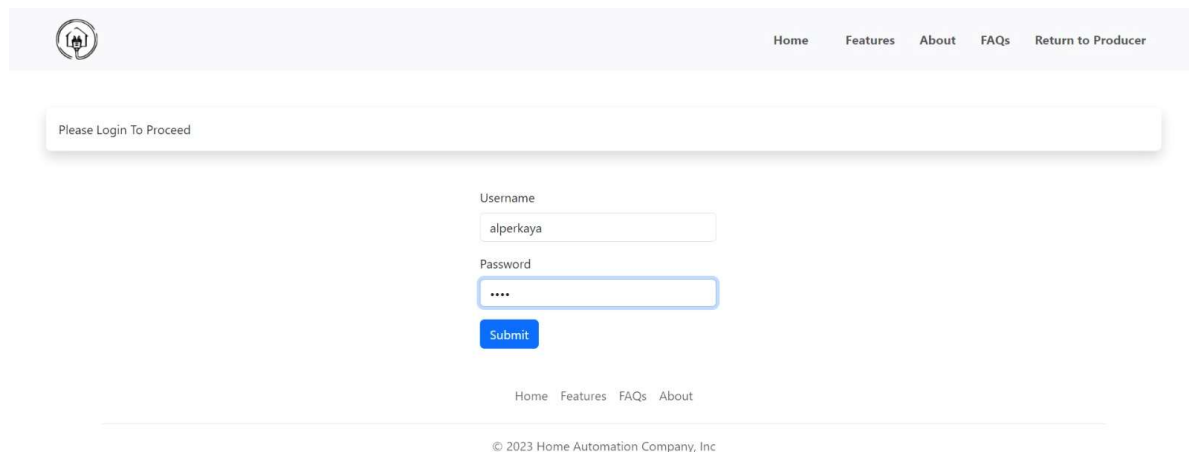

CONSUMER

- [Consumer Home Page](#)

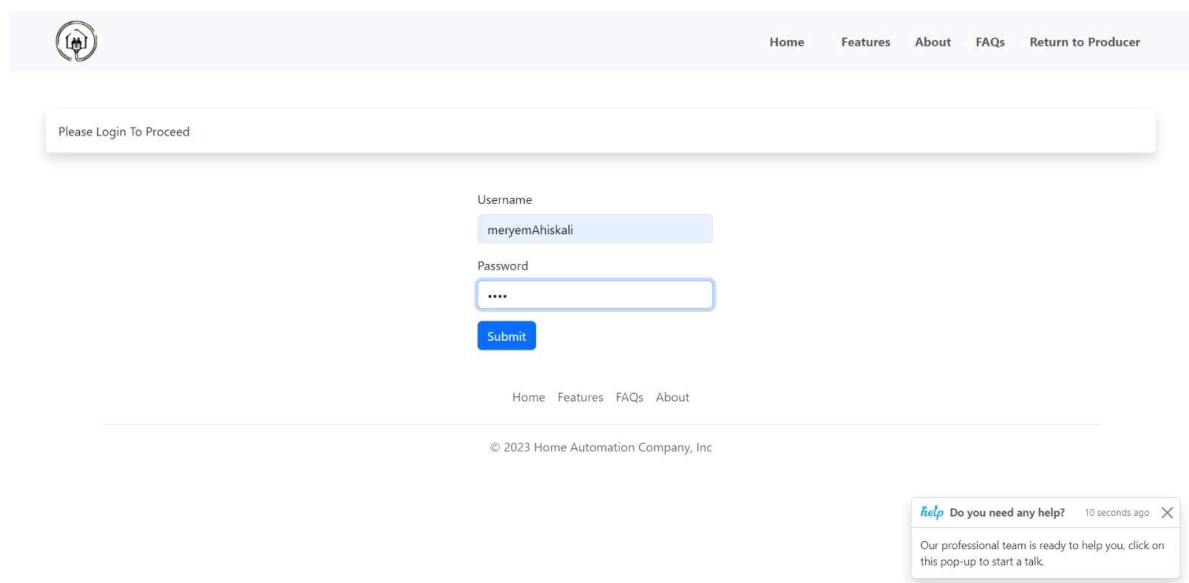

This page for consumer to first look of the page.

- **Log in Page**

This screenshot shows the login page of a web application. At the top, there is a navigation bar with a home icon and links for Home, Features, About, FAQs, and Return to Producer. Below the navigation bar, a message box says "Please Login To Proceed". The login form consists of two input fields: "Username" with the value "alperkaya" and "Password" with masked characters "****". A blue "Submit" button is located below the password field. At the bottom of the page, there is a footer with links for Home, Features, FAQs, and About, and a copyright notice: "© 2023 Home Automation Company, Inc".

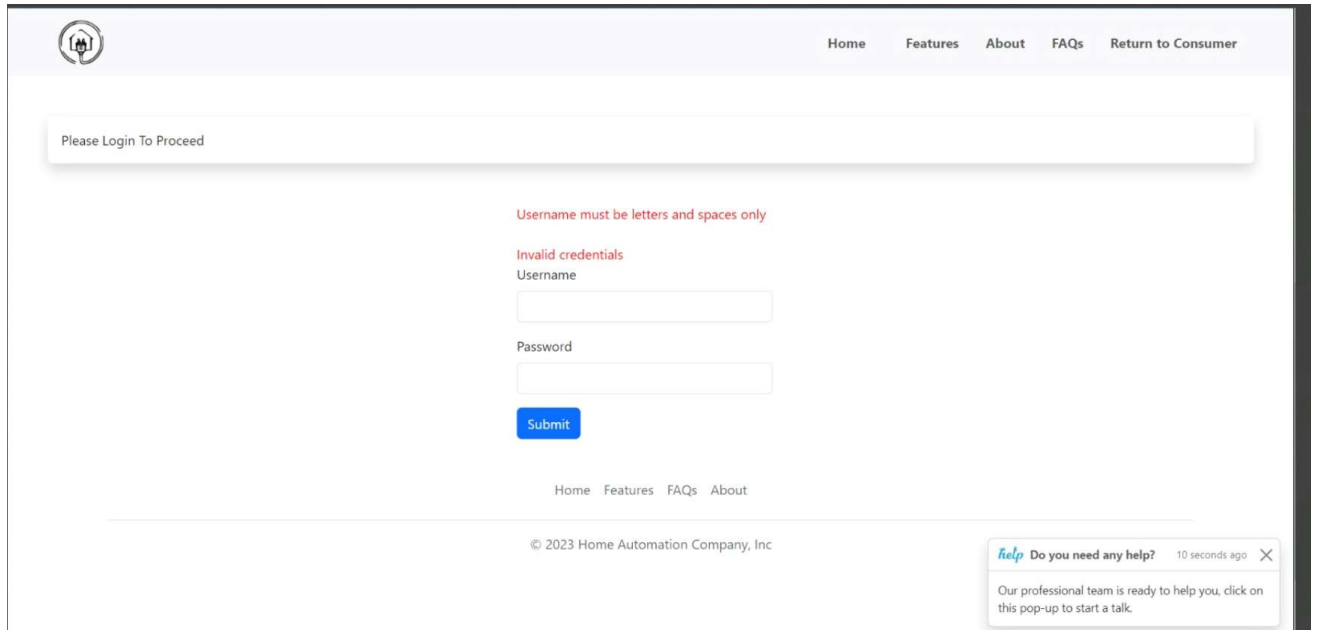

This screenshot shows the login page with a different set of credentials. The "Username" field now contains "meryemAhiskali" and the "Password" field still contains "****". The "Submit" button remains. A new element, a help chatbot, has appeared in the bottom right corner. The chatbot has a header "help Do you need any help?" with a timestamp "10 seconds ago" and a close button. The main text of the chatbot says: "Our professional team is ready to help you, click on this pop-up to start a talk."

Login Information for Consumer:

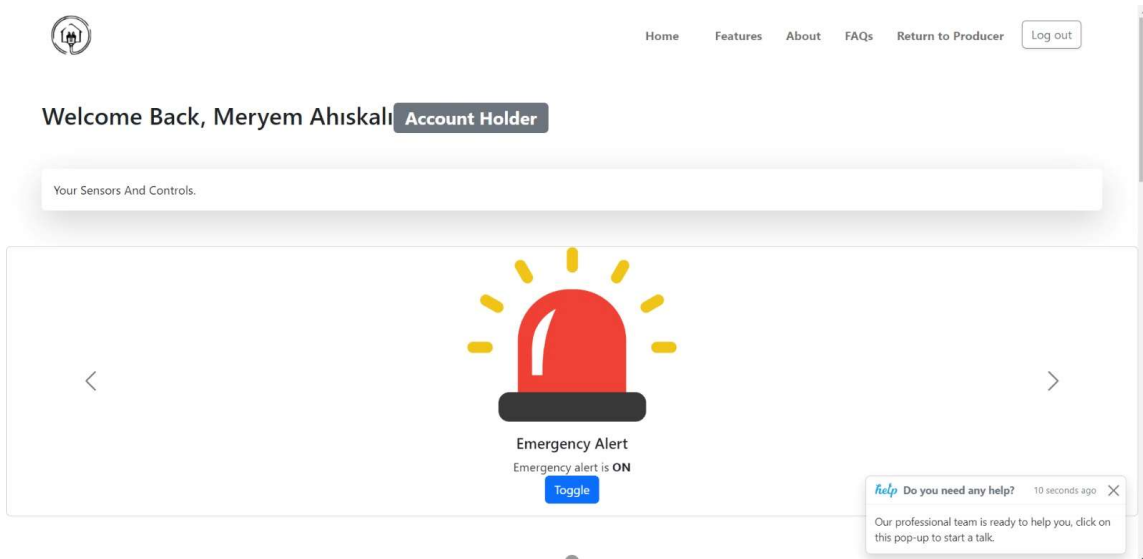

username-password: meryemAhiskali 1234
alperkaya 5678

If you enter something other than a letter or space as your username during login, or if you enter something other than a number as your password, the system will display a warning.

- [After Logged In](#)

The system greets you with a "Welcome back" message based on the username you used to log in.

Welcome Back, Alper Kaya **Account Holder**
